

AMBASSADOR ENSIGNS

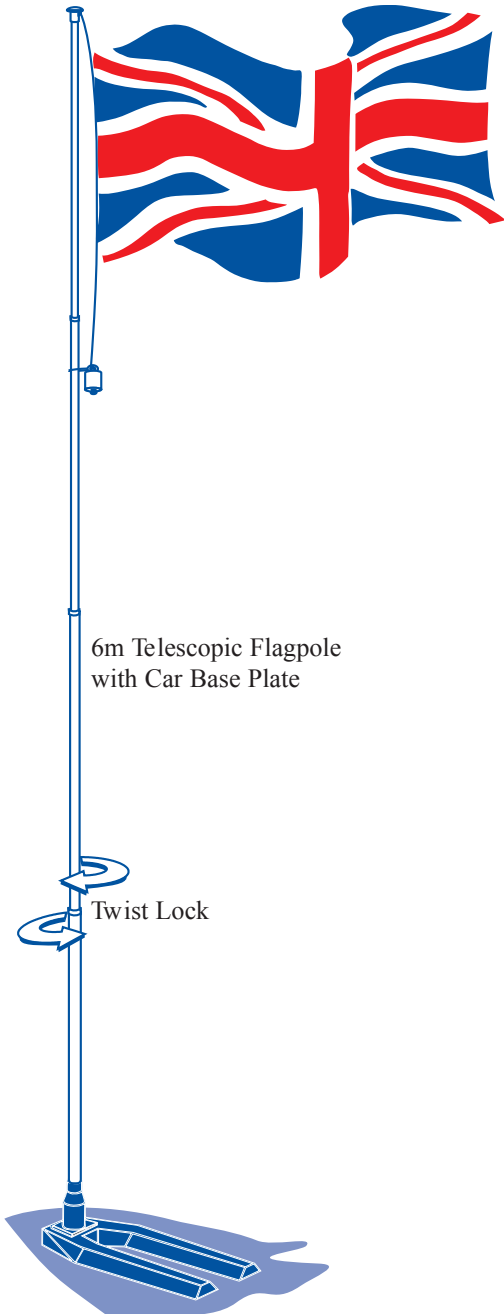

SIX METRE & FOUR METRE PORTABLE FLAGPOLES

Ambassador Ensigns offer a stylish silver anodised 6m telescopic flagpole which is ideal for indoor and outdoor displays. This pole is believed to be unique in the UK and provides an adaptability and sturdiness second to none in the industry. The pole comes with a rotating top and a variety of standing arrangements: guy rope system for soft ground and car wheel base plate for hard ground. There is also an optional gallow arm to enhance the versatility of this valuable promotional aid.

Our pole is truly portable, telescoping down to length of about 1.5m (5ft) and is easily transported in a car. The pole is just as easily assemble, employing a tried and tested twist lock mechanism to hold the extendable sections in place.

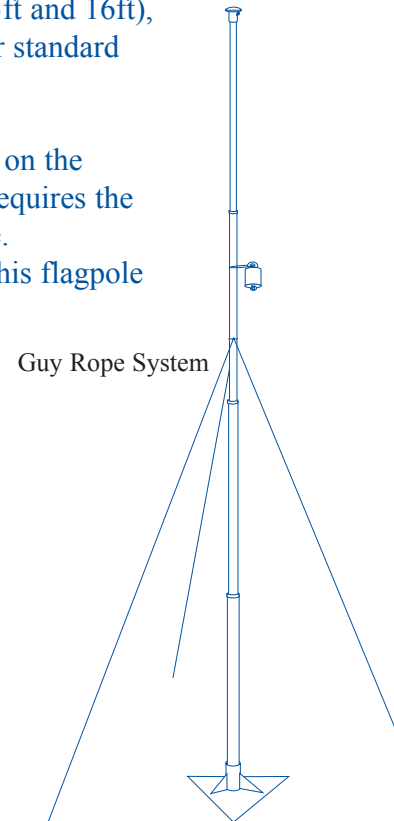

We have also developed a solid two sectional portable pole. Manufactured in two standard sizes 4m and 5m (13ft and 16ft), it uses the same wall thickness of aluminium as our standard flagpoles.

This pole is primarily geared for a user who insists on the strength of a standard 6m or 8m flagpole but also requires the ability to move the pole conveniently from site to site. Developed to handle extreme weather conditions, this flagpole performs superbly.
